

## Mac: Deleting files

In the event that you experience a connection failure during a test, you will need to manually delete some of the files generated during your test. These instructions cover how to do this after you have exited SEB.

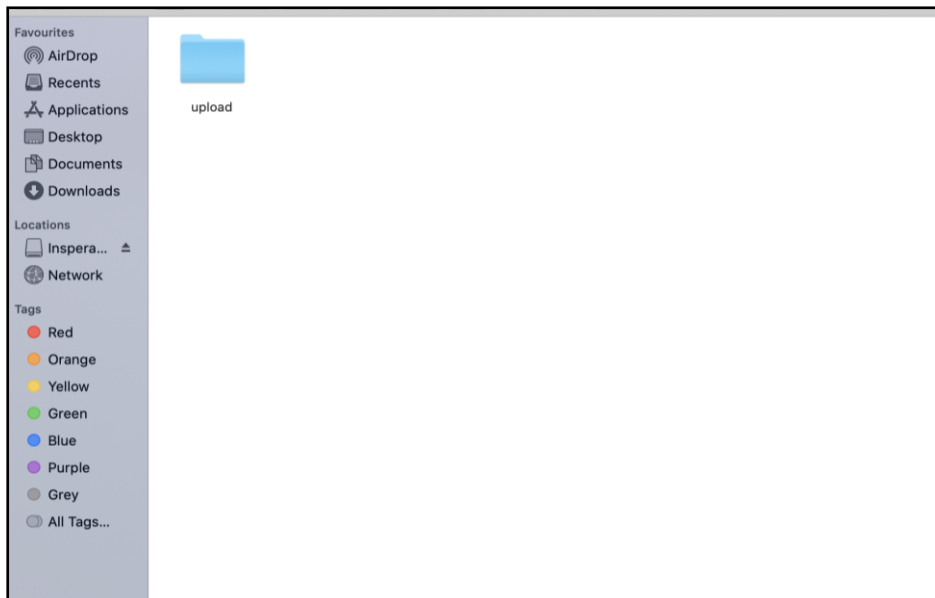

1. Click “Command” + “F” . This will open search in your finder and you will see the window below:

2. Select “Folder” and type “Inspera SEB” as shown below. You will see an Inspera SEB folder.

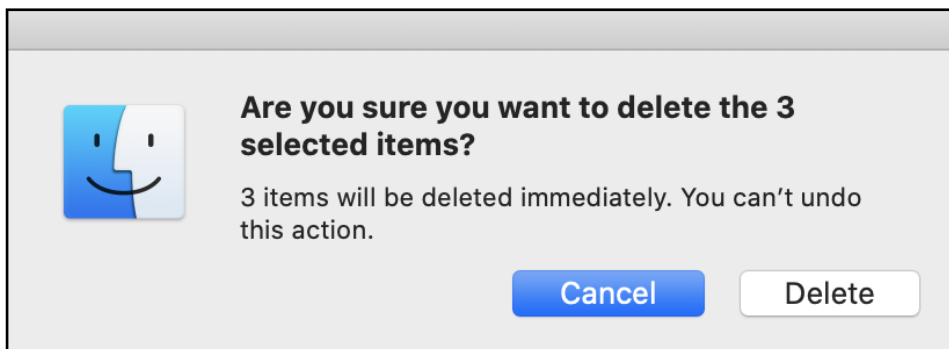

3. Double click on Inspera SEB folder. You will see an upload folder.

4. Double click to open upload folder and select all files inside.

5. Press: "Command" + "Option" + Backspace key. You will get the prompt below, click "Delete".

Alternatively, you can also delete all files in upload folder and delete them again in Recycle Bin.
